Oughterside Foundation School - Science

Year: 4

Topic: Living things and their habitats

What should I already know?

- Animals can be grouped into **vertebrates** (and then further into fish, reptiles, amphibians, birds and mammals) and **invertebrates**
- Animals can be grouped into carnivores, herbivores and omnivores
- The differences between the teeth of carnivores and herbivores.
- The names of some common wild and garden plants and **deciduous** and **evergreen** trees.
- Examples of **habitats** (including **microhabitats**) and the animals and plants that can be found there.
- Living things depend on each other to survive.
- How land use has changed over time and the effects this has on the environment (e.g. urban development)

Vocabulary				
biomes	a natural area of vegetation and animals			
carnivore	an animal that eats meat			
classification key	a system which divides things into groups or types			
criteria	a factor on which something is judged			
deciduous	trees that lose leaves in the autumn every year			
environment	all the circumstances, people, things, and events around them that influence their life			
evergreen	a tree or bush which has green leaves all the year round			
excretion	the process of eliminating waste from the body			
food chain	a series of living things which are linked to each other because each thing feeds on the one next to it in the series			
habitat	the natural environment in which an animal or plant normally lives or grows			
herbivore	an animal that only eats plants			
invertebrate	a creature that does not have a spine, for example an insect, a worm, or an octopus			
life processes	There are seven processes that tell us that living things are alive			
microhabitat	a small part of the environment that supports a habitat , such as a fallen log in a forest			
minibeast	a small invertebrate animal such as an insect or spider			
nutrition	the process of taking food into the body and absorbing the nutrients in those foods			
omnivore	person or animal eats all kinds of food, including both meat and plants			
organism	a living thing			
reproduction	when an animal or plant produces one or more individuals similar to itself			
respiration	process of respiring; breathing; inhaling and exhaling air			
sensitivity	responding to the external environment			
urban	belonging to, or relating to, a town or city			
vegetation	plants, trees and flowers			
vertebrate	a creature which has a spine			

What will I know by the end of the unit?

Strand: Biology

How can living things be grouped?

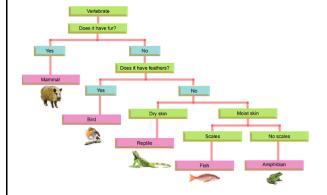

- All living things, which can also be called organisms, have to do certain things to stay alive. These are the life processes:
 - movement
 - respiration
 - sensitivity
 - growth
 - reproduction
 - excretion
 - nutrition

• Living things can be grouped according to different **criteria** (where they live, what type of **organism** they are, what features they have). For example, a camel can belong in a group of **vertebrates**, a group of animals that live in the desert, and a group of animals that have four legs.

What is a classification key?

 A classification key is a tool that is used to group living things to help us identify them.

How can **environments** change?

- **Habitats** can change throughout the year and this can have an effect on the plants and animals that live there.
- Humans can have positive and negative effects on the environment:
 - positive effects: nature reserves, ecological parks
 - negative effects: litter, urban development

Investigate!

- Complete Venn diagrams to show if living things can be grouped into two or more groups .
- Use criteria to sort living things in a Carroll diagram.
- Sort **vertebrate** and **invertebrate** animals into groups, describing their key features. Use a **classification key** to identify which group of **vertebrates** animals belong to and then create your own.
- Sort plants into groups (e.g. flowering plants and non-flowering plants) and then create a **classification key** to help others identify plants.
- Carefully observe minibeasts in a microhabitat and use a classification key to identify them.
- Use simple computer software programmes to create a branching classification key.
- Explore examples of human impact (both positive and negative) on environments.

Topic: Living things and their habitats Year: 4 Strand: Biology

Question 1: Which of these is not	Start of	End of
a vertebrate?	unit:	unit:
bird		
mammal		
reptile		
insect		
amphibian		

Question 2: A duck and a fish are similar	Start of	End of
because(tick three)	unit:	unit:
they are both vertebrates		
they both need food and water to survive		
they both breathe using gills		
they are both invertebrates		
they both lay eggs		

Question 3: Write the word of each living thing in the Venn diagram to show where they belong.	Start of unit:	End of unit:
camel has four legs cactus polar bear whale		

Question 4: Write the w belong.	ord of each living thing in	the Carroll diagram t	o show where they	Start of unit:	End of unit:
salmon		can fly	can not fly		
sparrow	lays eggs				
rabbit	does not lay eggs				
frog					

Question 5: Complete the table by adding the name of the minibeast in the right place.			Start of unit:	End of unit:	
fly	spider	worm	ants		
name		legs	wings		
		6	0		
		0	0		
		8	0		
		6	2		
-

Question 6: Which three things do all	Start	End of
animals do?	of unit:	unit:
move		
walk		
reproduce		
grow		

Question 7: What can we use to help us	Start of	End of
accurately identify living things?	unit:	unit:
a food chain		
looking after the environment		
a classification key		
living processes		

Question 8: Name one thing that makes these nem different.	*	Start of unit:	End of unit:
similar	different		

Question 9: Look at the following classification key. We each box?	hich question belongs in	Start of unit:	End of unit:
Does the animal lay eg Yes Box 1 Yes No Yes No Frog giraffe owl penguin	No No No Cow		
Question	Box Number (1, 2 or 3)		
Does the animal have a long neck?			
Is the animal a bird?			
Does the animal fly?			

Question 10: List one way in which we help the local environment.	Start of unit:	End of unit:
